c. Measure the Depth (optional):

Finding the correct depth is important because some windows will be too deep to fit into a replacement window opening.

Run a tape measure from the outside of the frame to the inside and take the measurement from edge to edge of the window or door frame.

Do this in several locations around the window frame and rely on the smallest measurement once again as your final dimension.

- At the top (Depth 1),
- At the middle (Depth 2)
- At the bottom (Depth 3)

Measure the Depth of Flyscreen frame

Windows Flyscreen Frame Thickness 9mm or 11mm.

Just measure frame between 2 finger gap.
